

SCENEalert

Where Hindsight and Innovation Meet

SCENEalert kit converts your old fire hose to a visual life saving device. Used in conjunction with cones, **SCENE**alert creates a highly reflective visual barrier dividing the scene from the highway. Since the **SCENE**alert reflectors are tethered together via the fire hose, it serves as a constant visual reminder for emergency personnel not to cross into the traffic area between the cones. **SCENE**alert provides a colorful visual alertness for approaching traffic day or night. Unlike widely spaced cones, **SCENE**alert provides a clearer more defined guidance around the scene for passing by and approaching traffic. Simply unroll the **SCENE**alert in a safe area and quickly drag into position on the highway. When the scene is complete, drag the **SCENE**alert back to a safe area and rollup as any traditional fire hose for easy storage on the apparatus.

NOTE: It is recommended to use traffic cones in conjunction with the SCENEalert

SCENEalert Kit includes: (8) dual side aluminum reflectors and stainless steel mounting hardware
